

# H0m / 1:87

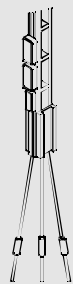

Für den anspruchsvollen Modellbahner: Signale der Rhätischen Bahn im Schmalspurmasstab H0m.

serie 701  
series 701

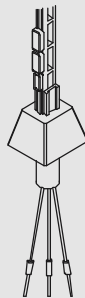

Die filigranen, masstabgerechten Modelle werden vollständig aus Messing in Handarbeit hergestellt und sind vorbildgetreu lackiert. Durch die neue Optik mit weißen Leuchtdioden und Farbfiltern zeigen die Signale perfekt vorbildgerechte Farben der Leuchten. Die Vorwiderstände und eine Schutzdiode gegen Falschpolung der Leuchtdioden sind im Signal integriert. Alle Leuchtdioden können einzeln angesteuert werden, wodurch alle Fahrbegriffe dargestellt werden können. Das Sortiment umfasst praktisch alle Signalversionen der Rhätischen Bahn. Damit der Einbau einfach wird, stehen verschiedene Sockelversionen zur Verfügung.

For sophisticated narrow gauge modelers: the signals of the Rhaetian Railway in H0m scale.

These highly detailed signals are handmade from precision brass parts and painted in original colours. The new optics based on white Light Emitting Diodes with color filters displays perfectly matched colours. All signals come equipped with integrated series resistors and a diode to prevent false polarity. All LEDs may be controlled independently which allows to display all signal aspects. Our program covers practically any signal type of the Rhaetian Railway. All signals are available with different socket types for easy mounting and connection.
